#Java based #NoSQL servers and a new project JNoSQL w/ @otaviojava

youtu.be/-YFVJkgLzCI

The diagram illustrates the relationship between NoSQL and SQL. It shows a 'Data Tier' with 'Column' and 'Document' databases. Above this is a 'JNoSQL' layer with 'Mapping' and 'Communication' components. At the top is a 'DAO' layer. The diagram also lists 'NoSQL' types: CouchDB, Redis, membase, and mongoDB. It notes that NoSQL is 'Not Transaction' and 'Doesn't use structure'. The SQL side is labeled 'SQL' and 'Not only SQL'.

Java-based NoSQL servers and a new project JNoSQL
<https://youtu.be/-YFVJkgLzCI>
with Otavio Santana - facebook.com/otaviojava

Ver Tradução

The diagram shows the JNoSQL architecture. It features a 'DAO' layer at the top, which connects to a 'JNoSQL' layer. The JNoSQL layer includes 'Mapping' (using ARTEMIS) and 'Communication' (using DIANA). Below this is the 'Data Tier' with 'Column' and 'Document' databases. The diagram also lists 'NoSQL' types: CouchDB, Redis, membase, mongoDB, and riak. It notes that NoSQL is 'Database', 'Doesn't use structure', 'Not Transaction', and 'BASE'. The SQL side is labeled 'Not only SQL'.
