

Pre release new remote project wizard for PTP 3.0:

This brings up new remote project pane #1 –

Select remote tools, then hit “new” –

(note that I’m going for a remote makefile project, linux gcc.... )

New connection brings up:

Target Environment Configuration

### Remote Host

**X** Username cannot be empty

Target name: Remote Host

Host Information

Localhost  Remote host

Host:  Port: 22

User:

Password based authentication

Password:

Public key based authentication

File with private key:  Browse

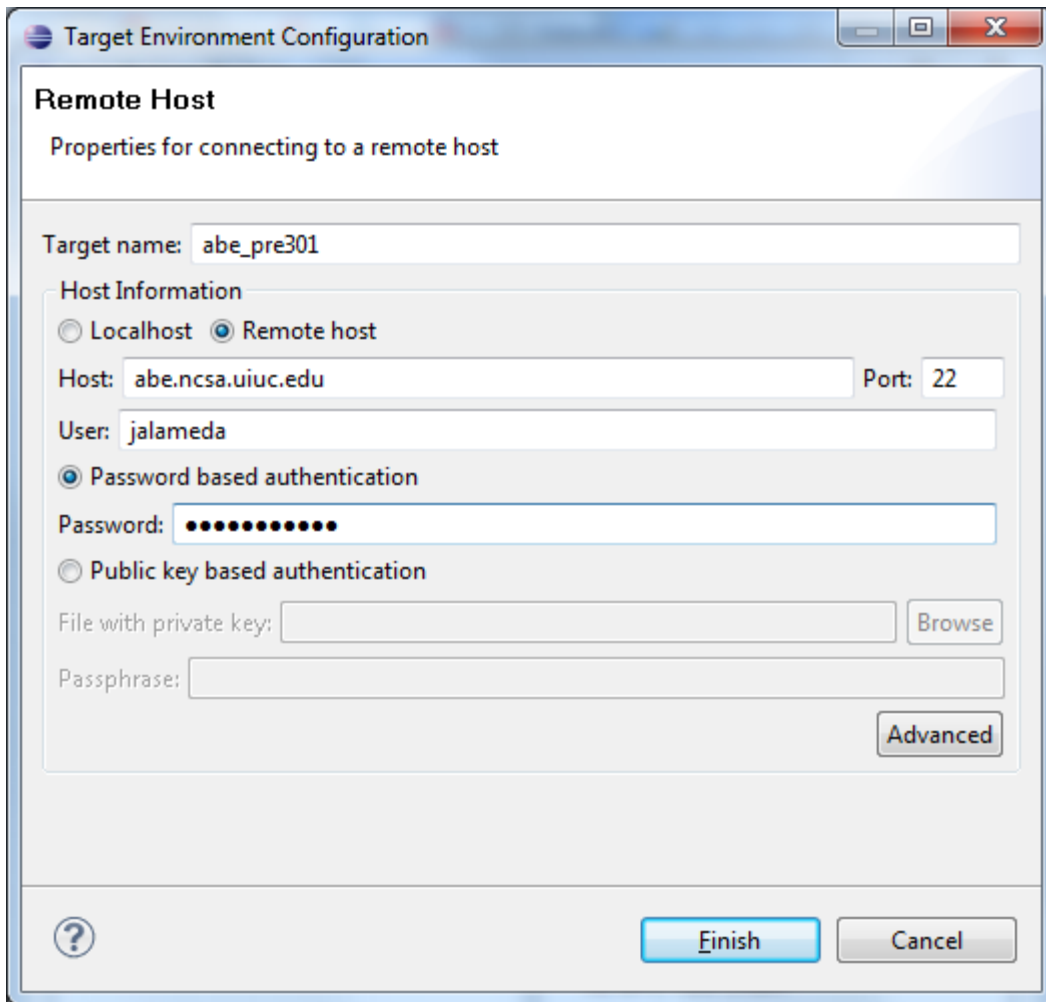

Passphrase:

Advanced

?

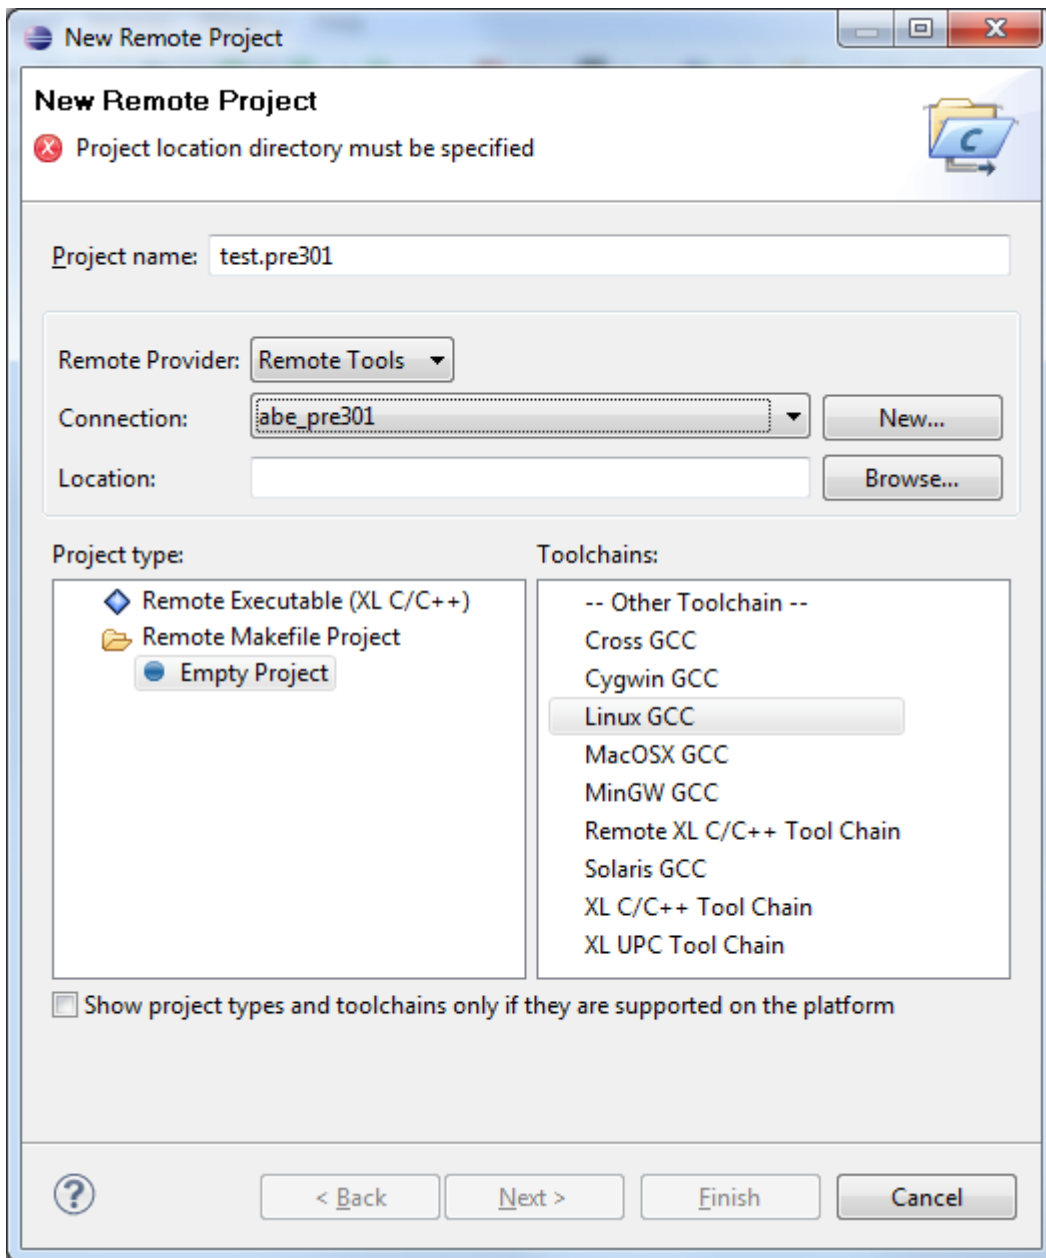

Finish Cancel

Filling this in for `abe.ncsa.uiuc.edu`:

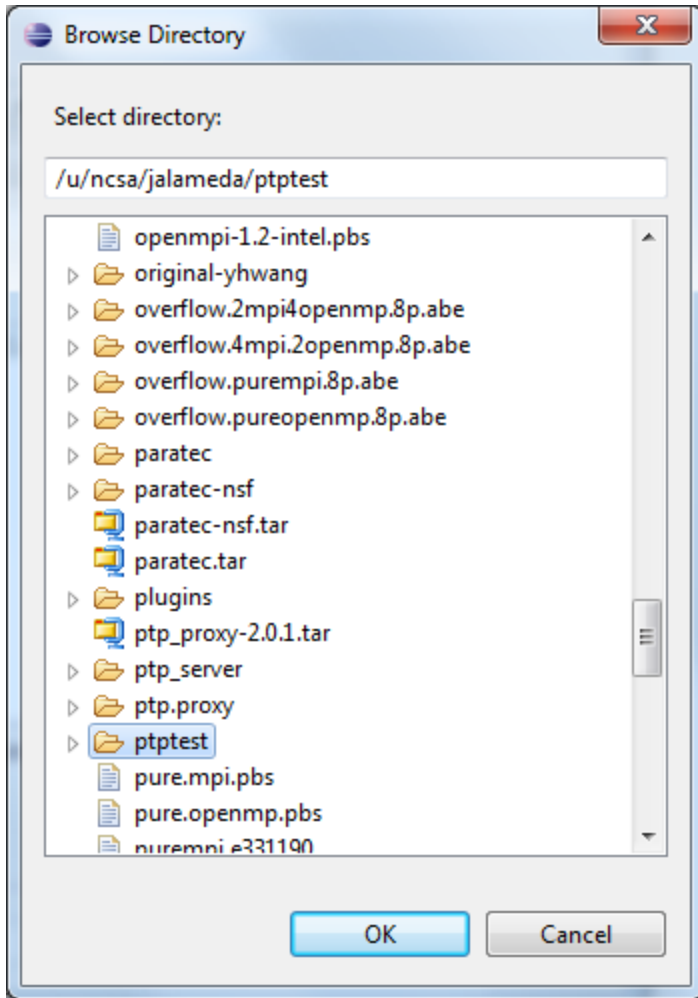

Then hit finish,

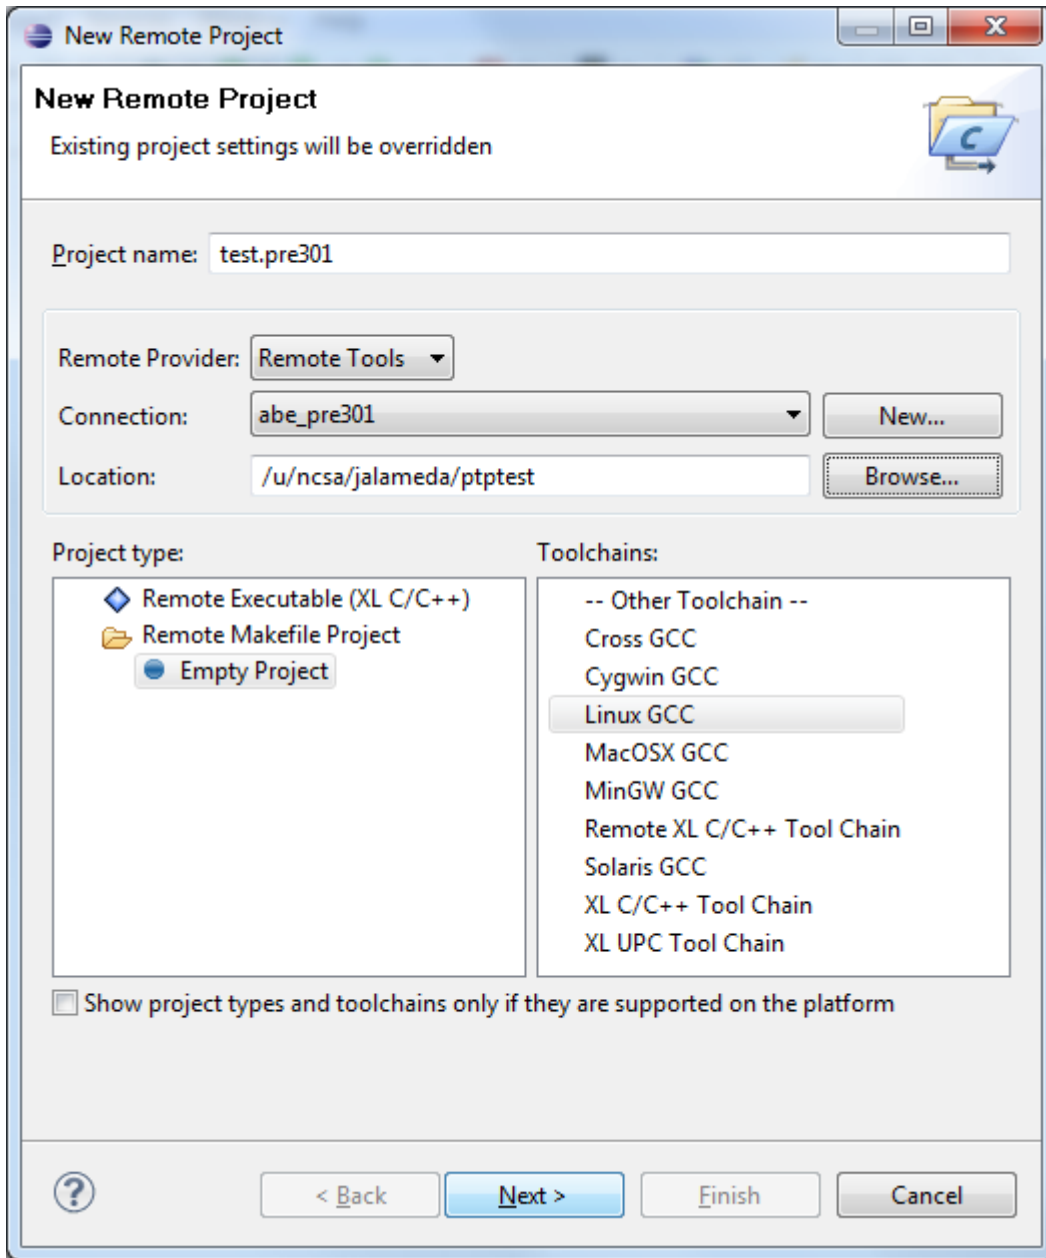

And select your new target at the new remote project pane #1

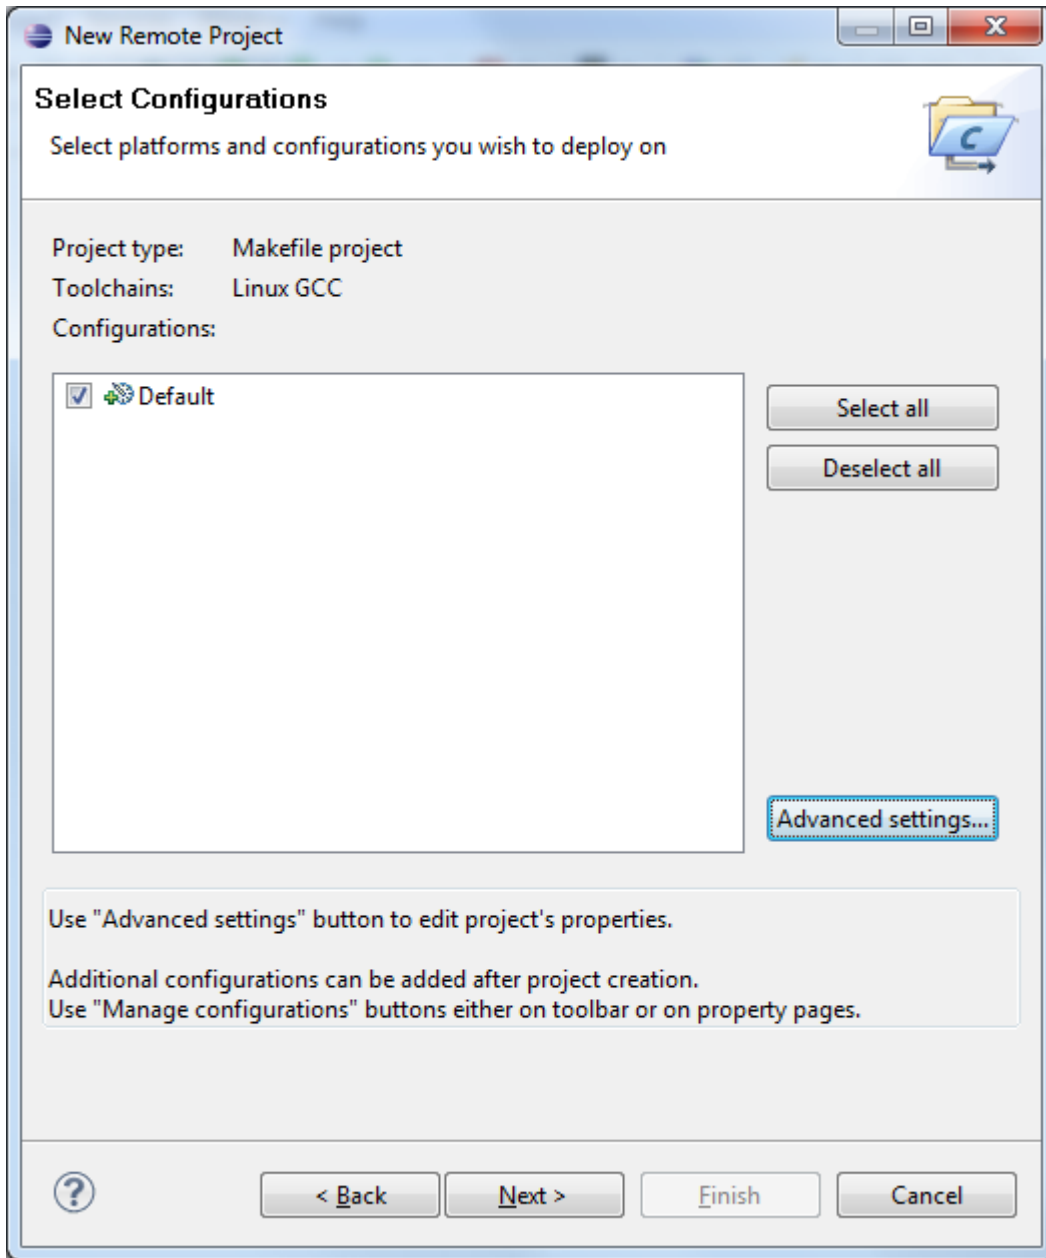

Note that to finish this off, one needs to select a directory \*on the remote host\* so hit Browse above –

Select a directory and move on –

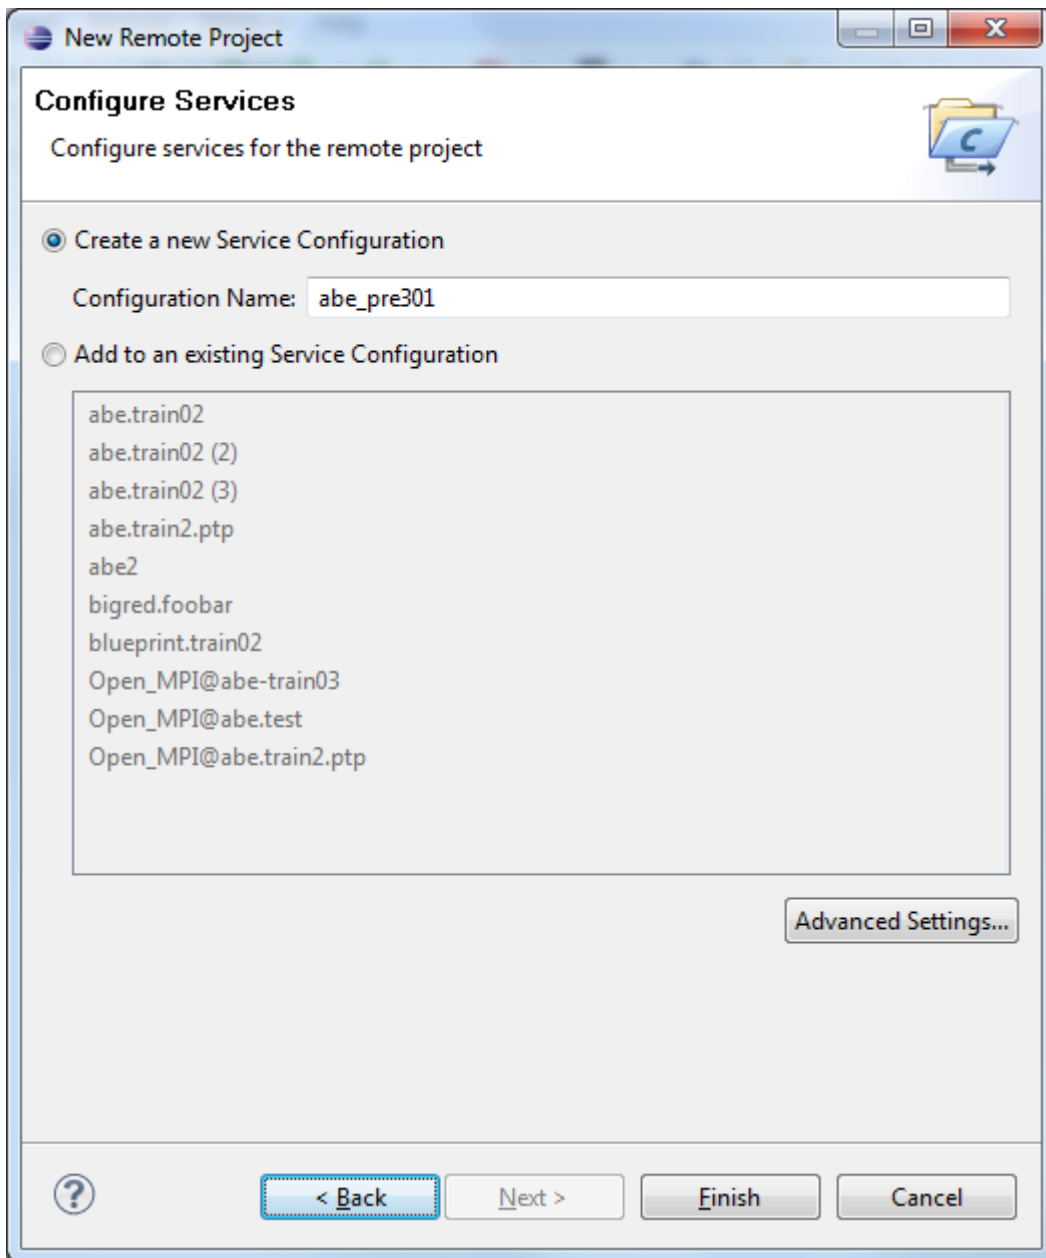

Next pane –

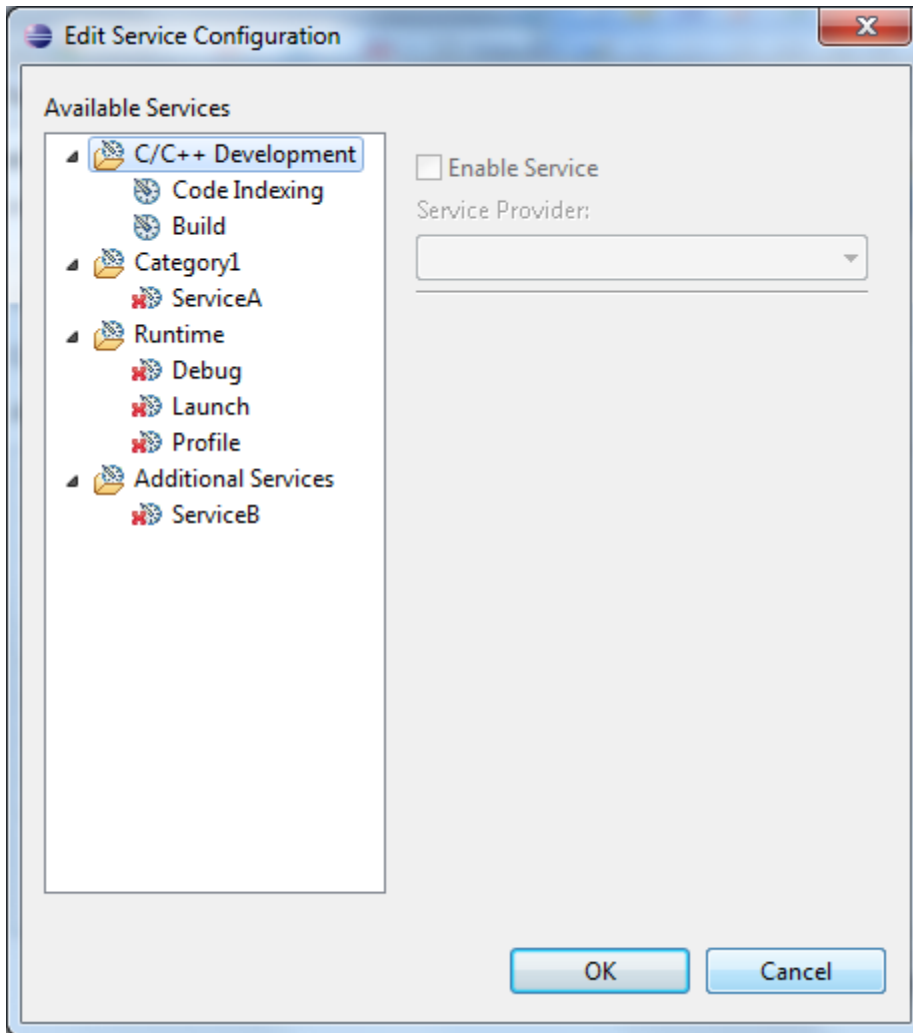

Nothing to do here –

Hit next, and then you come to the service configuration pane:

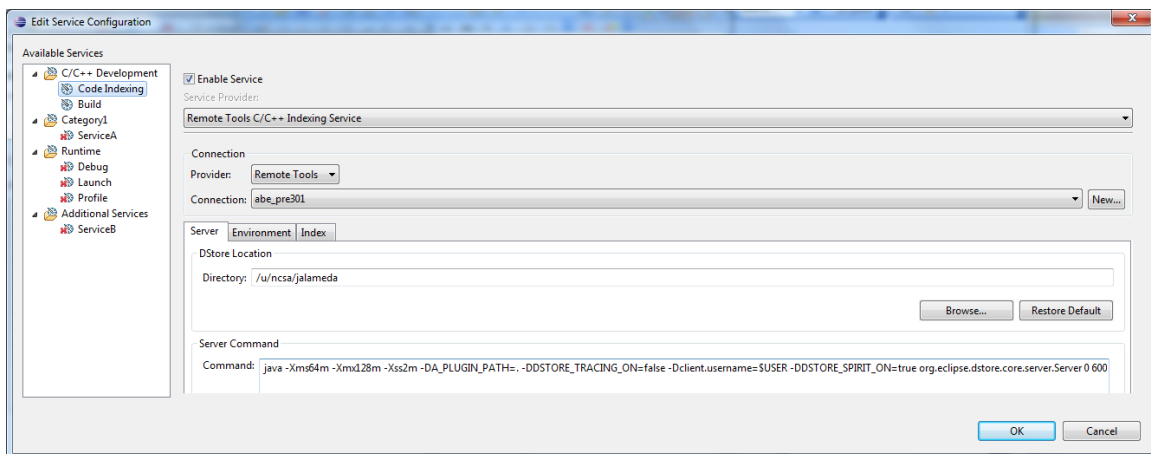

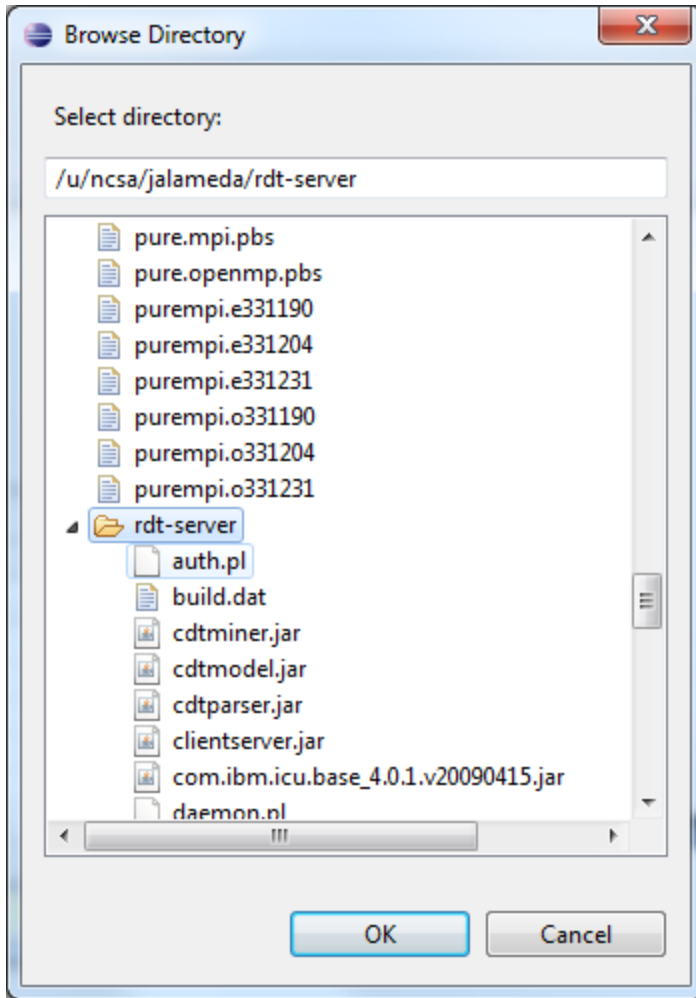

Selecting “advanced settings” pulls up this pane:

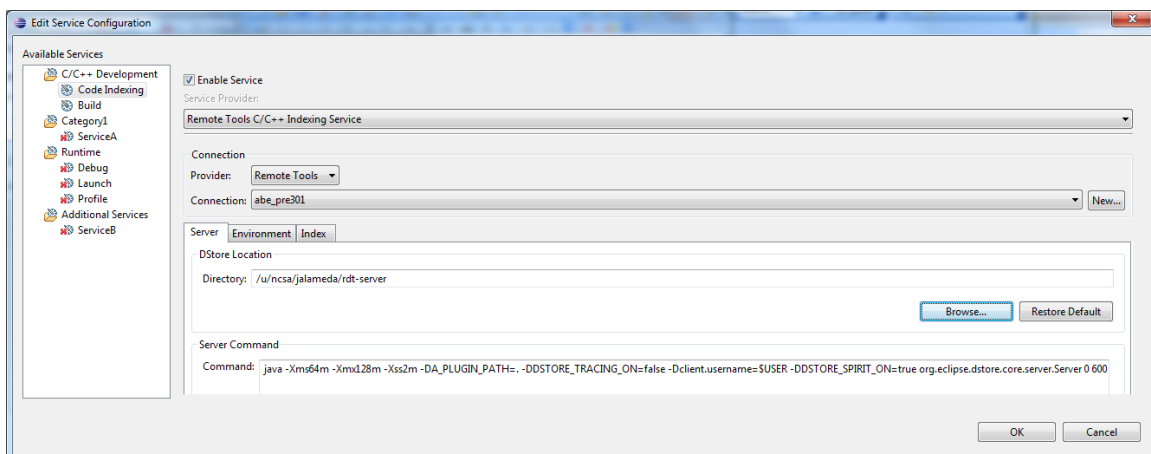

Select code indexing, and you get:

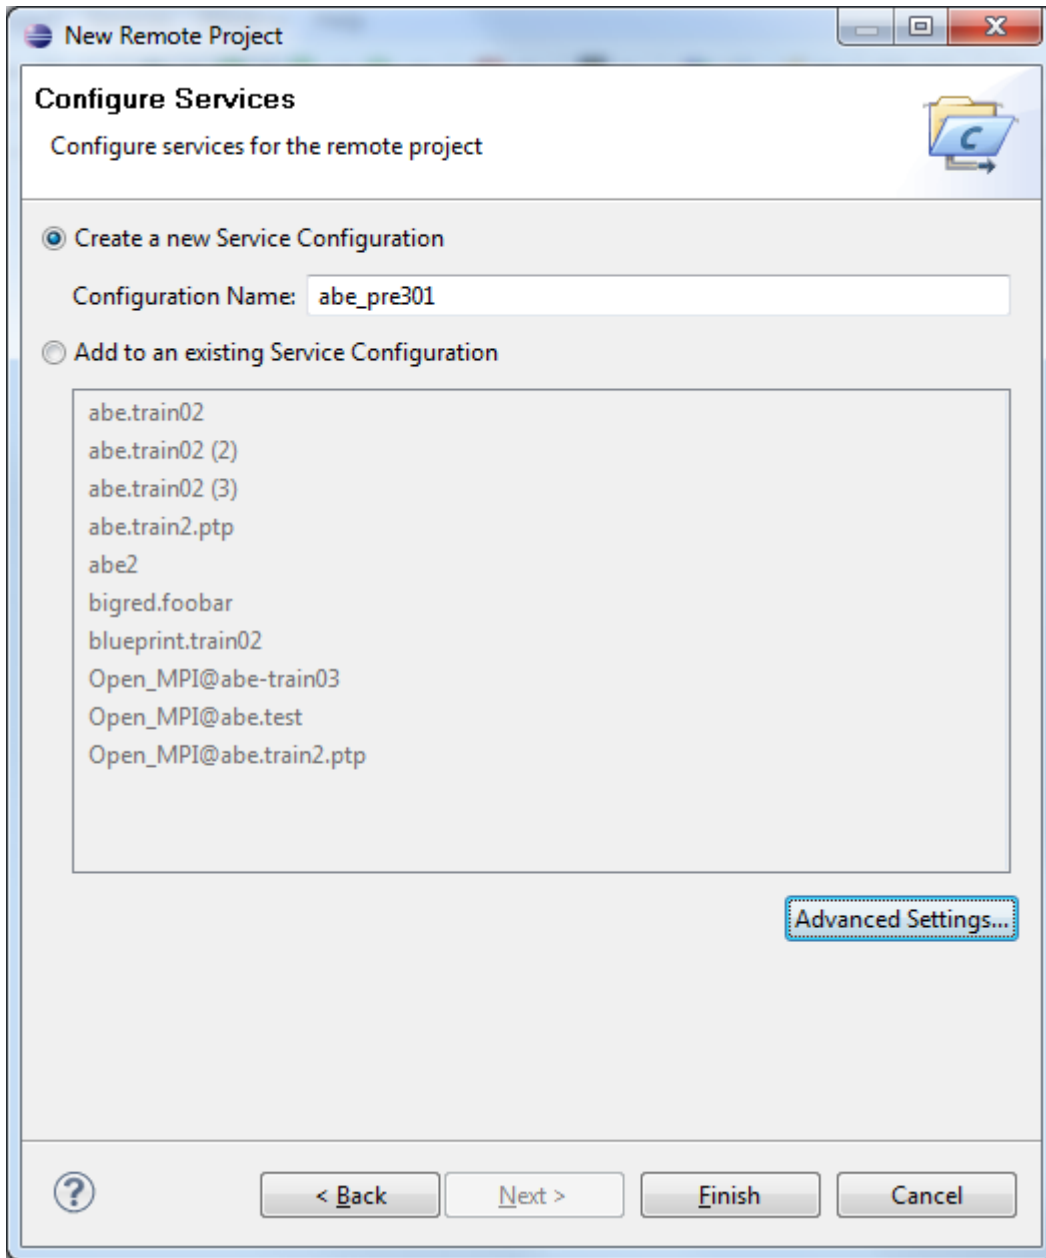

Need to select the location of rdt – so hit browse –

Which then fills in the correct path:

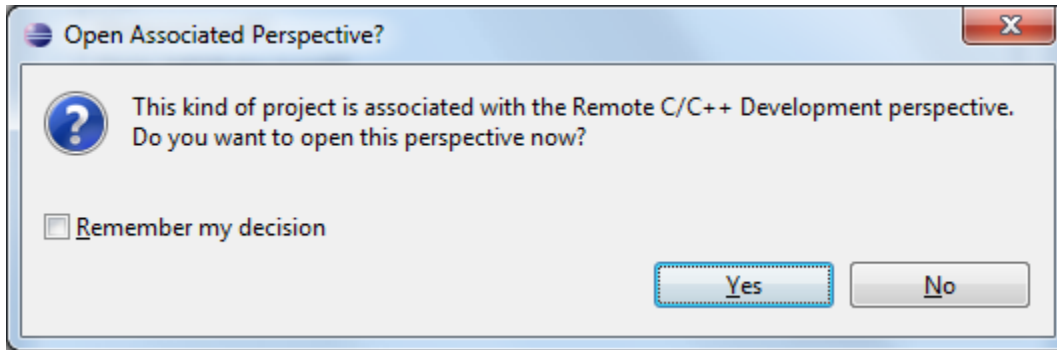

Hit OK, and then you return to

Select finish

And you will be given an opportunity to switch perspectives:

And, rats,  
Something else broke – the new RDT server may be broken too (I was using a new one, not one from November) –

```

---

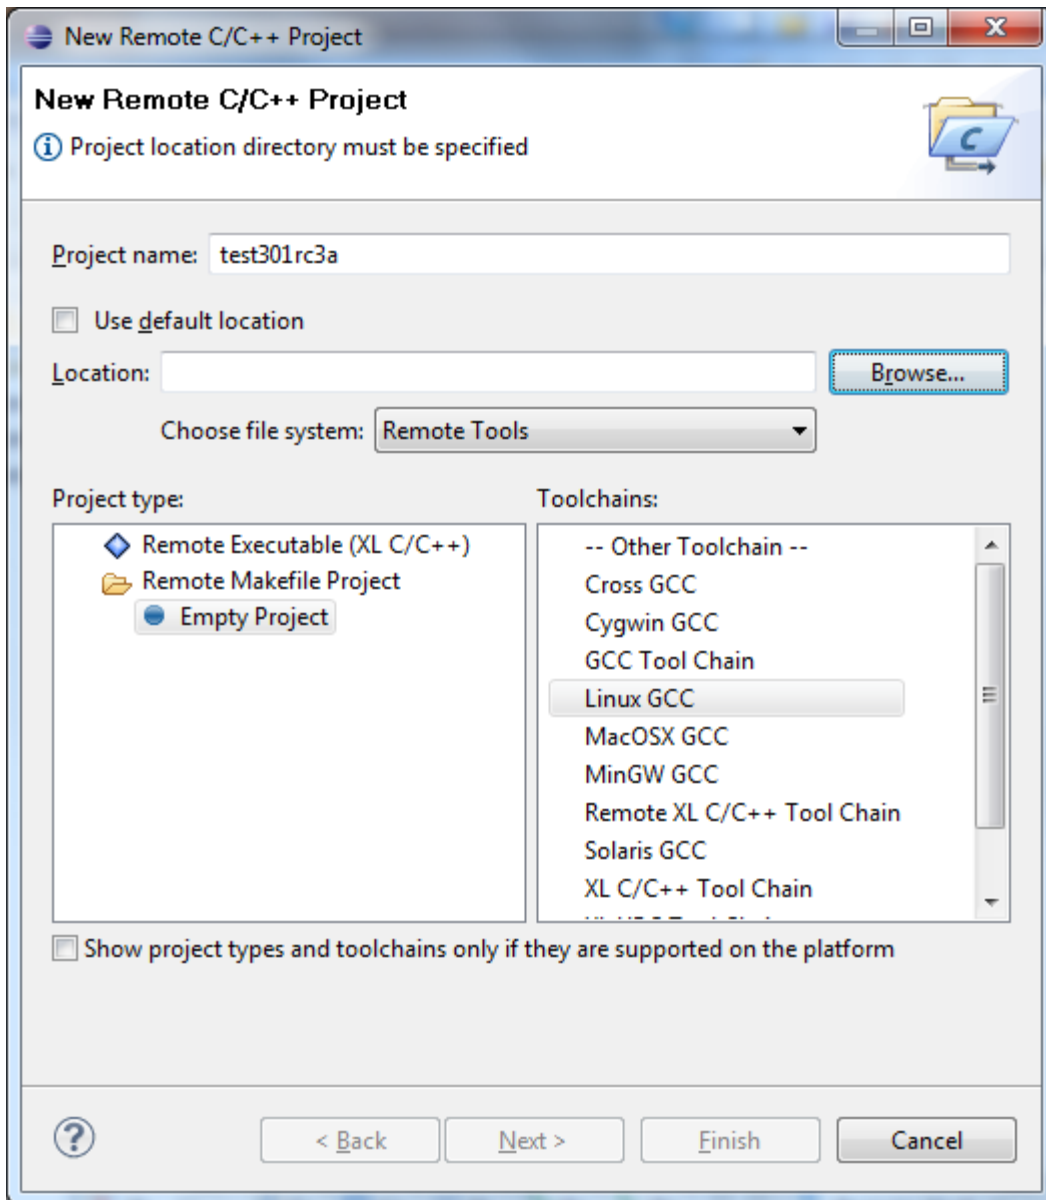

PTP 3.0.1 RC3a is very different –

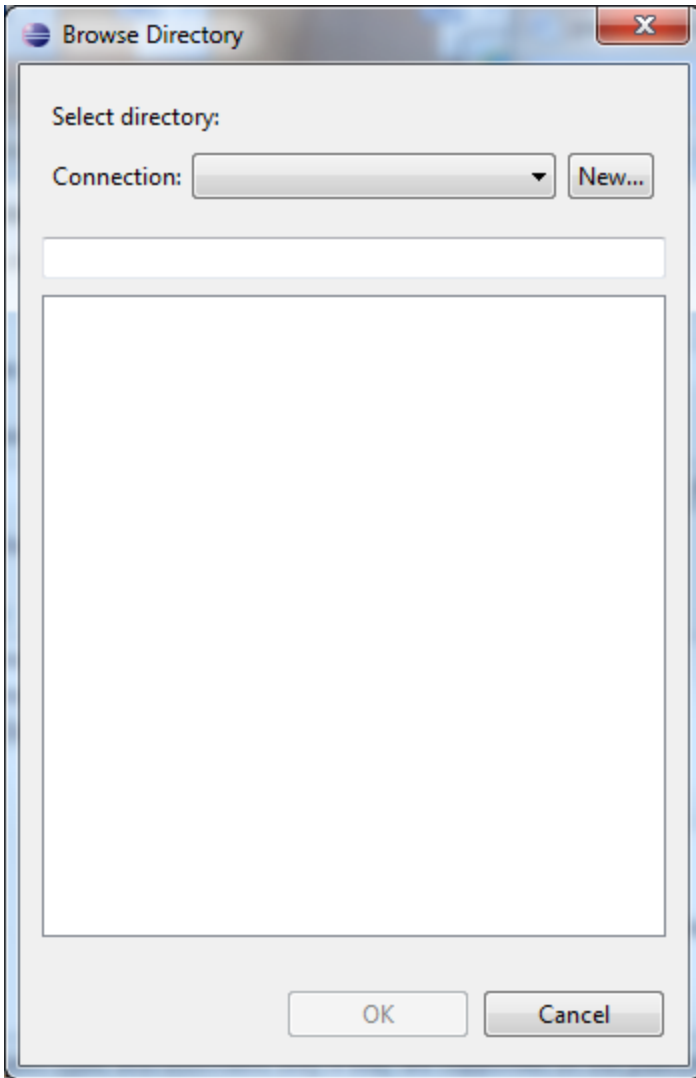

This brings up a different pane #1 –

Trying to mimic something like the other wizard – name the project, unselect use default location – and choose remote tools

Try hitting the browse button –

Make a new connection –

Target Environment Configuration

### Remote Host

**✘ Username cannot be empty**

Target name:

**Host Information**

Localhost  Remote host

Host:  Port:

User:

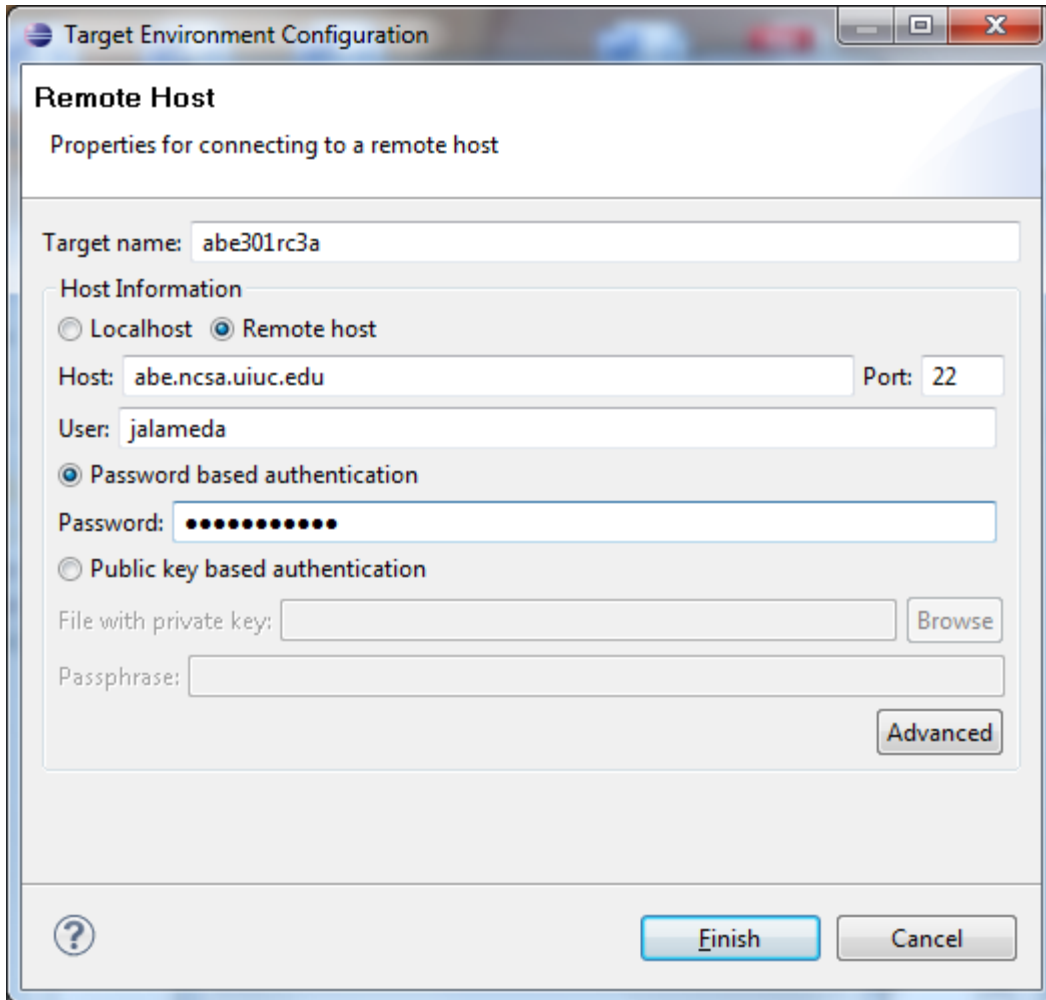

Password based authentication

Password:

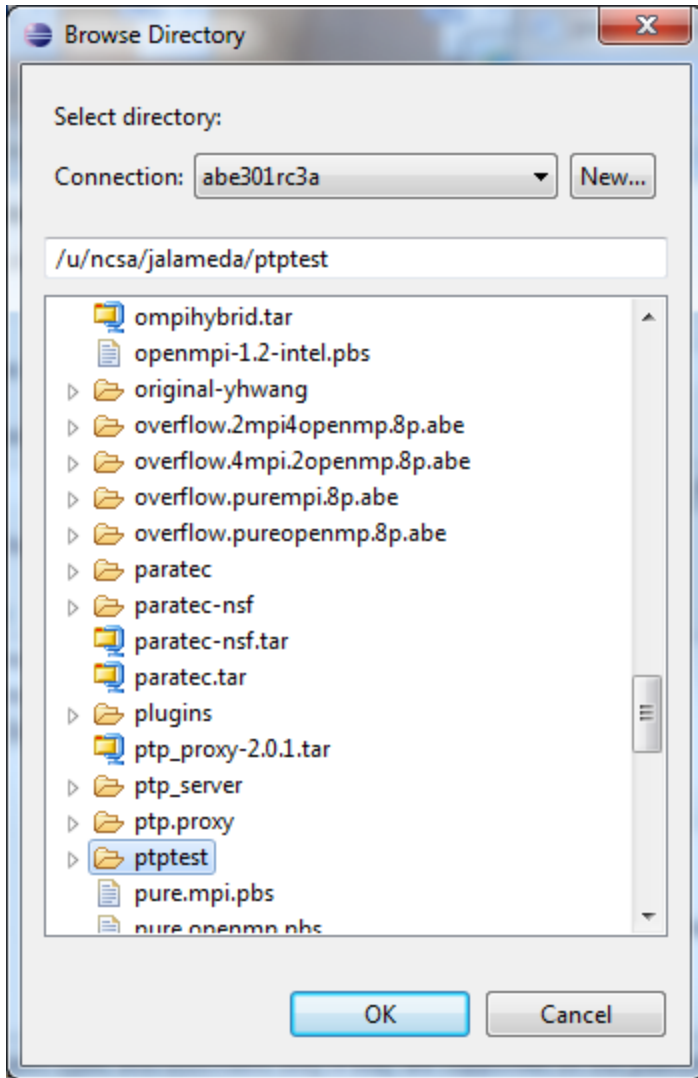

Public key based authentication

File with private key:

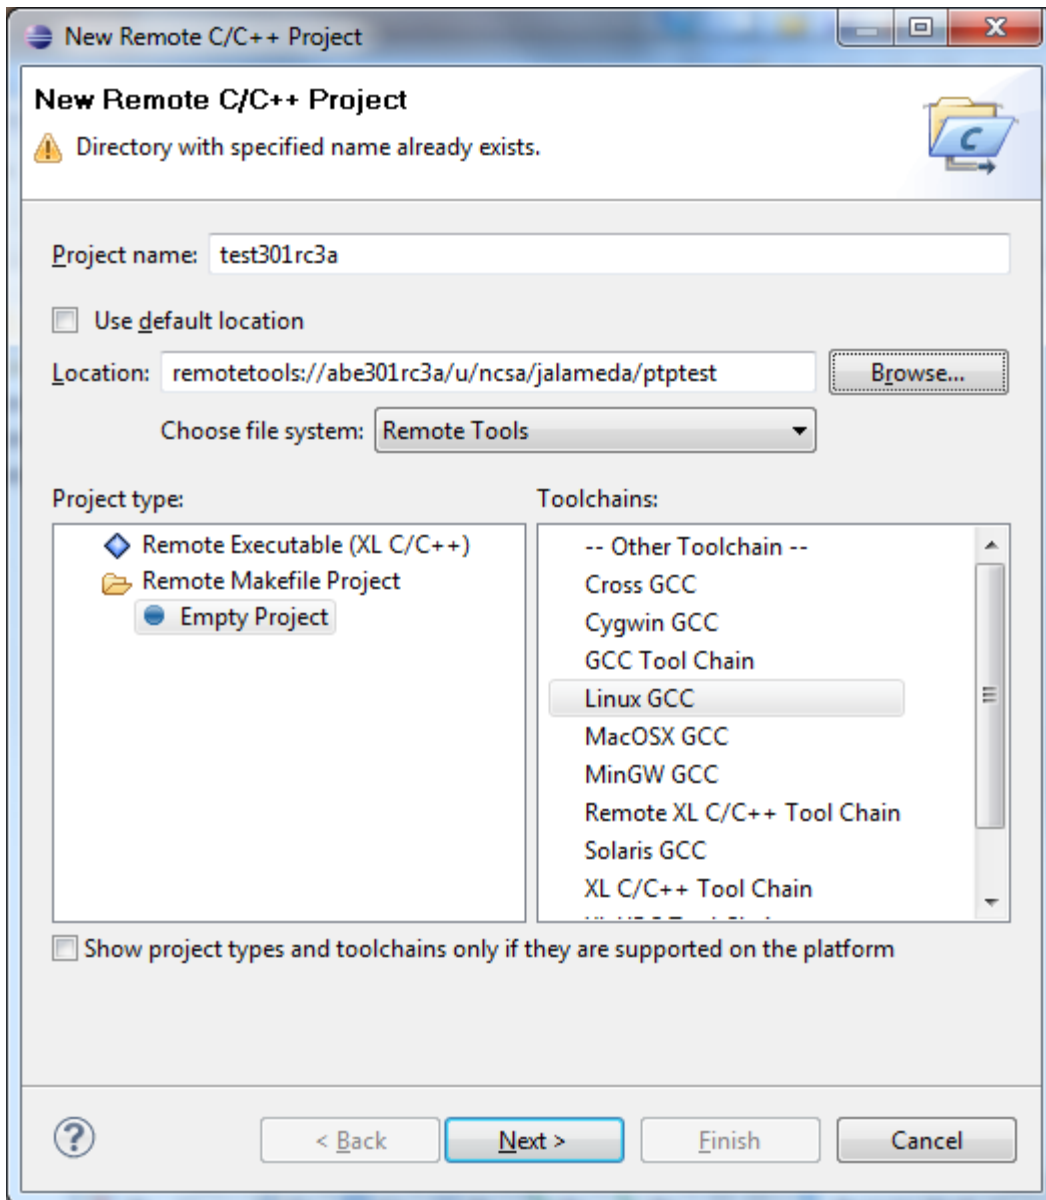

Passphrase:

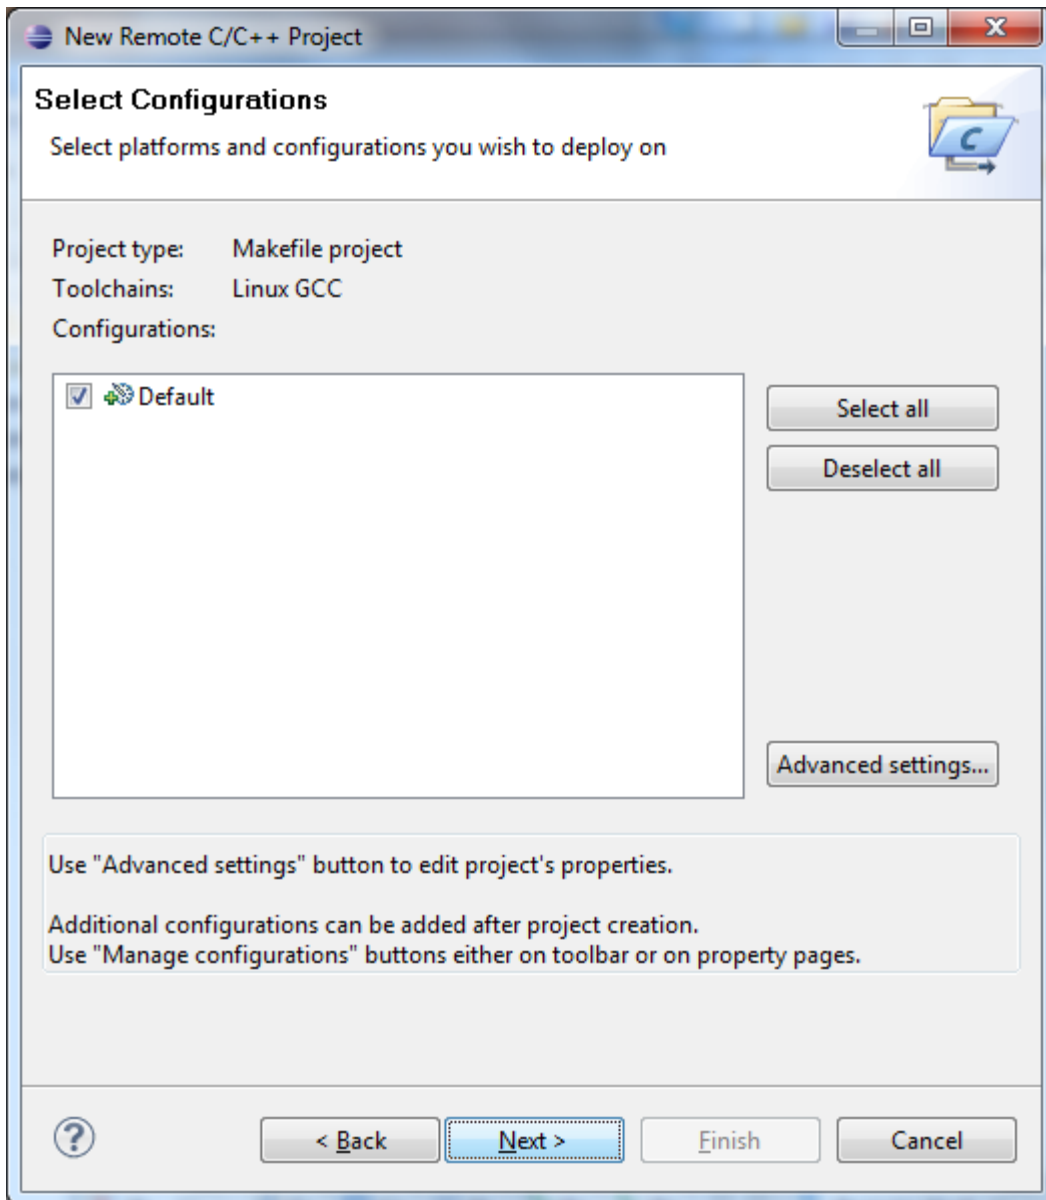

Choose project directory again:

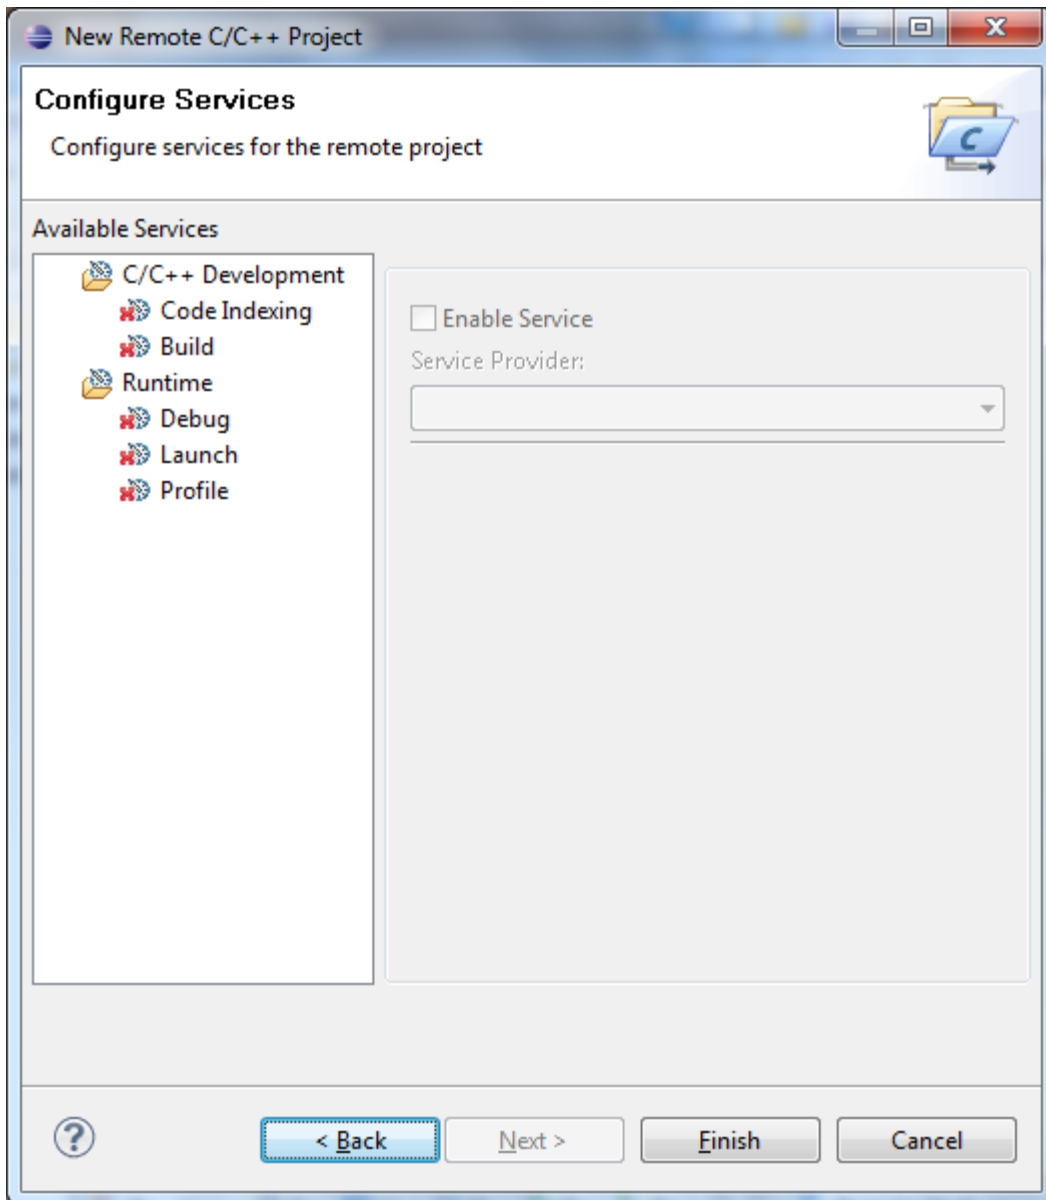

And we can now move forward –

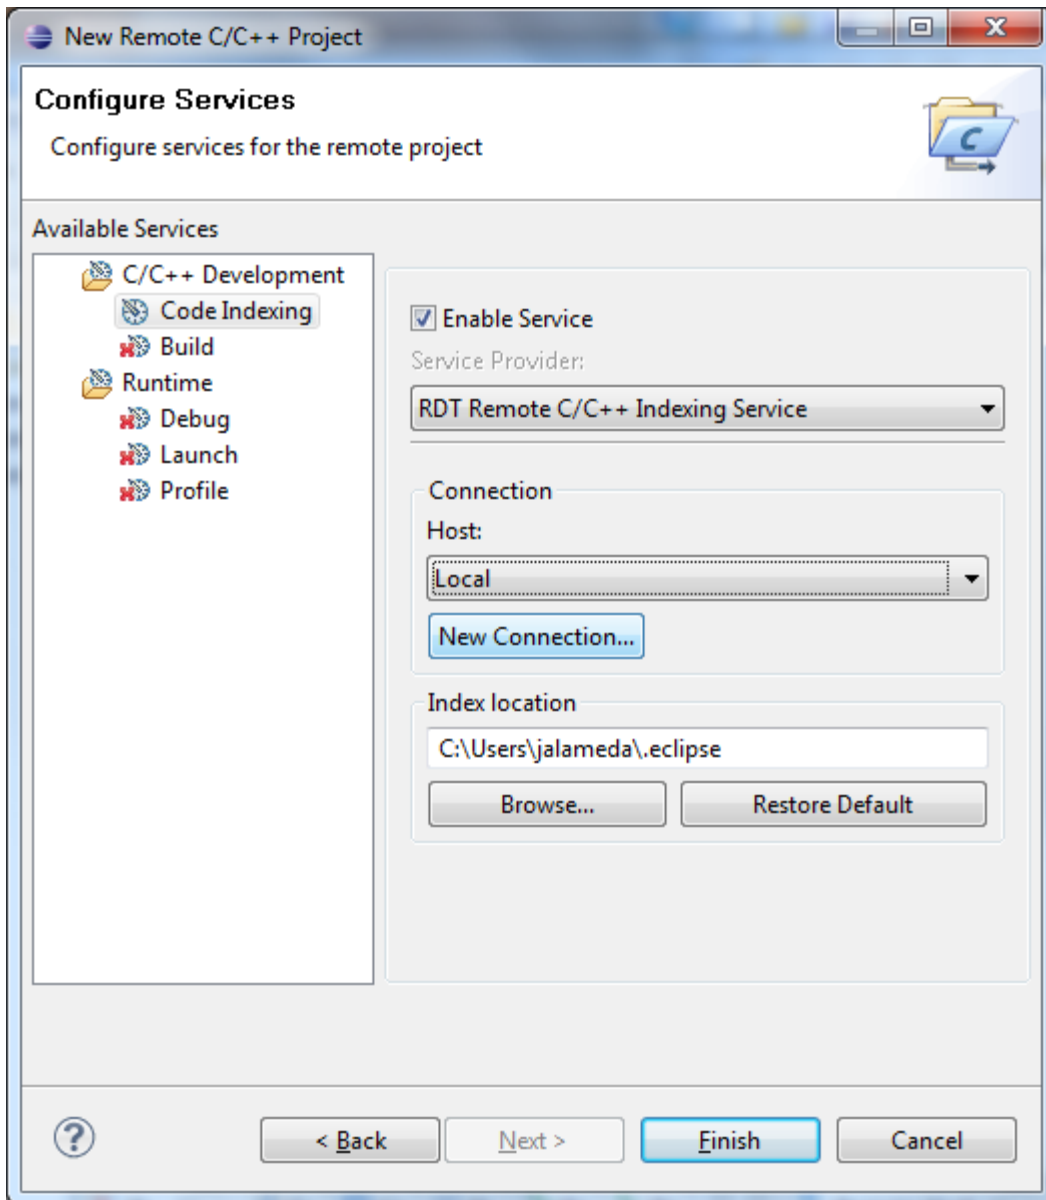

Same middle pane:

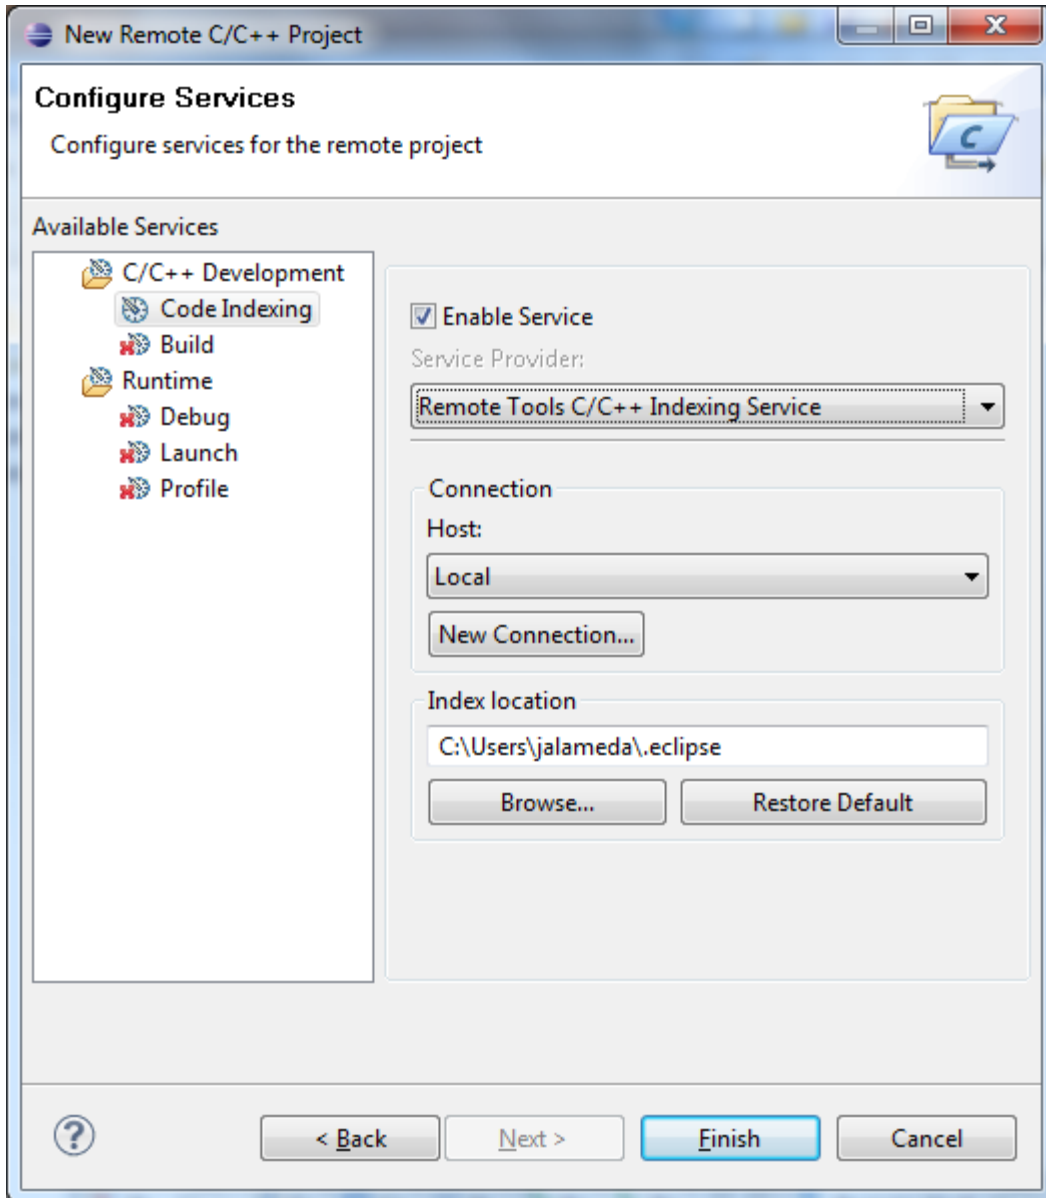

Now at configure service pane:

Choosing code indexing – enabling the service, we come to

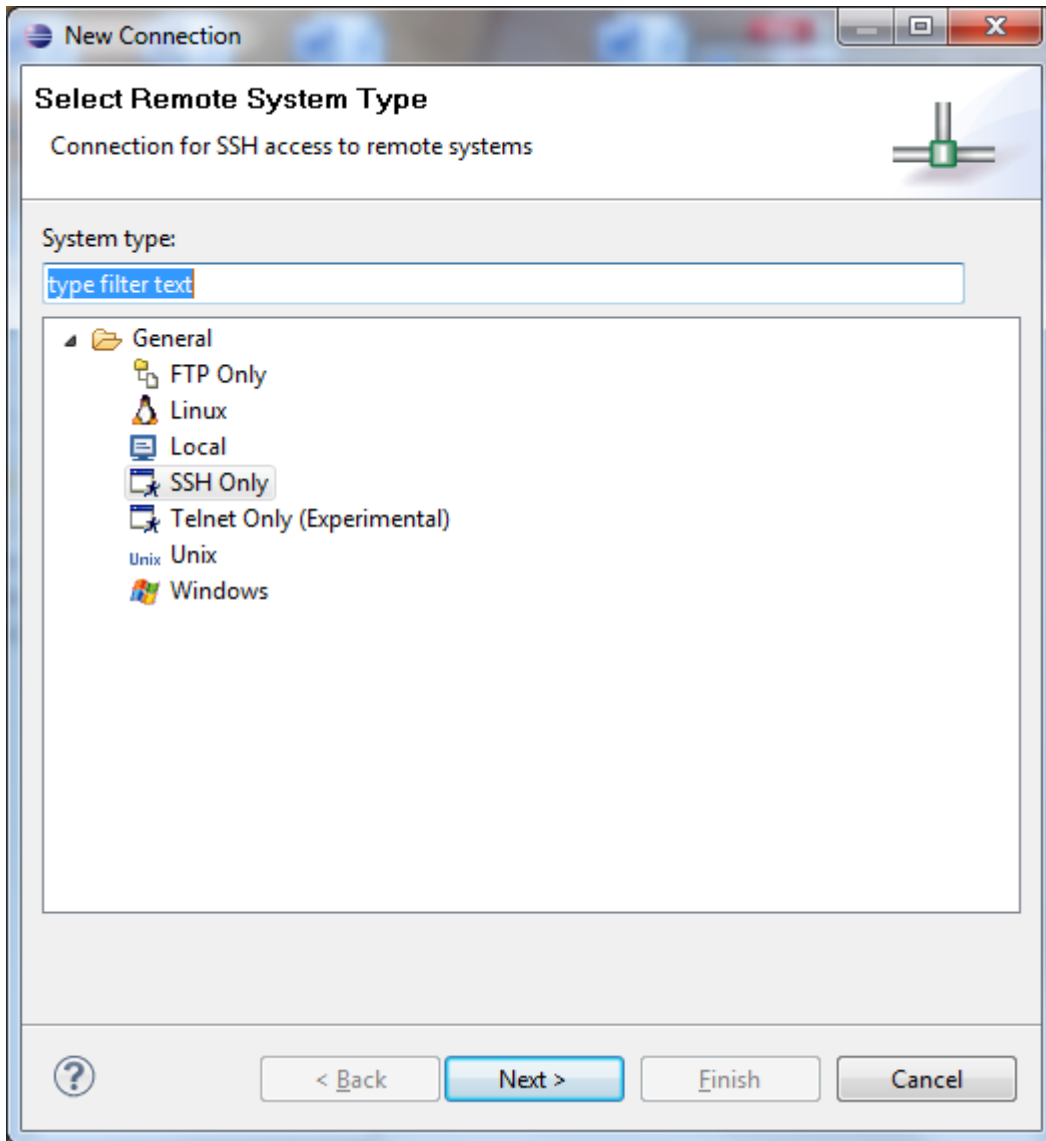

Have to choose remote tools remote c/c++ indexing service,

At this point, can't see the connection that previously set up for remote tools – “new connection” only provides:

Which I don't think is right – this is a RSE connection, not remote tools.

This may be the crux of the wizard issue – for 3.0.1 RC3a
