

Steven Marney

Chief Technologist, Automotive & Connected Solutions
Digital Mobile Innovations (DMI), LLC

Steve Marney is a hands-on enterprise architect and software developer. He has served in a number of chief architect, chief technologist, and enterprise architect roles in the automotive, manufacturing, financial, retail, government, and IT services management domains.

Steve is passionate about Open Source and has a long history of leading and influencing international standards bodies, industry conferences, and partner advisory councils to help shape and promote the adoption of interoperability standards and emerging technologies.

He presently serves as Chief Technologist of DMI's Automotive and Connected Solutions business, driving innovation in software-defined vehicles through strategic open source investments and coordinating relationships between product and marketing groups, R&D teams, and partner ecosystems.

Steve looks forward to the opportunity to represent the collective voice of all participant members at the Steering Committee level.
