

SDV Contribution Day Participation Process Session

2022.05.12

Agenda

- **Welcome and Introduction**
- **SDV Contribution Days - Concept and Timeline**
- **The Relationship between Projects and Working Groups**
- **The Project Onboarding Process**
- **Logos, Trademarks and Websites for Projects**
- **Q&A**

Welcome and Opening Remarks

SDV Membership Commitments (as of May 10th, 2022)

SDV Contribution Days - Concept and Timeline

The SDV Development Model

The “classical” approach

Spec

The SDV approach

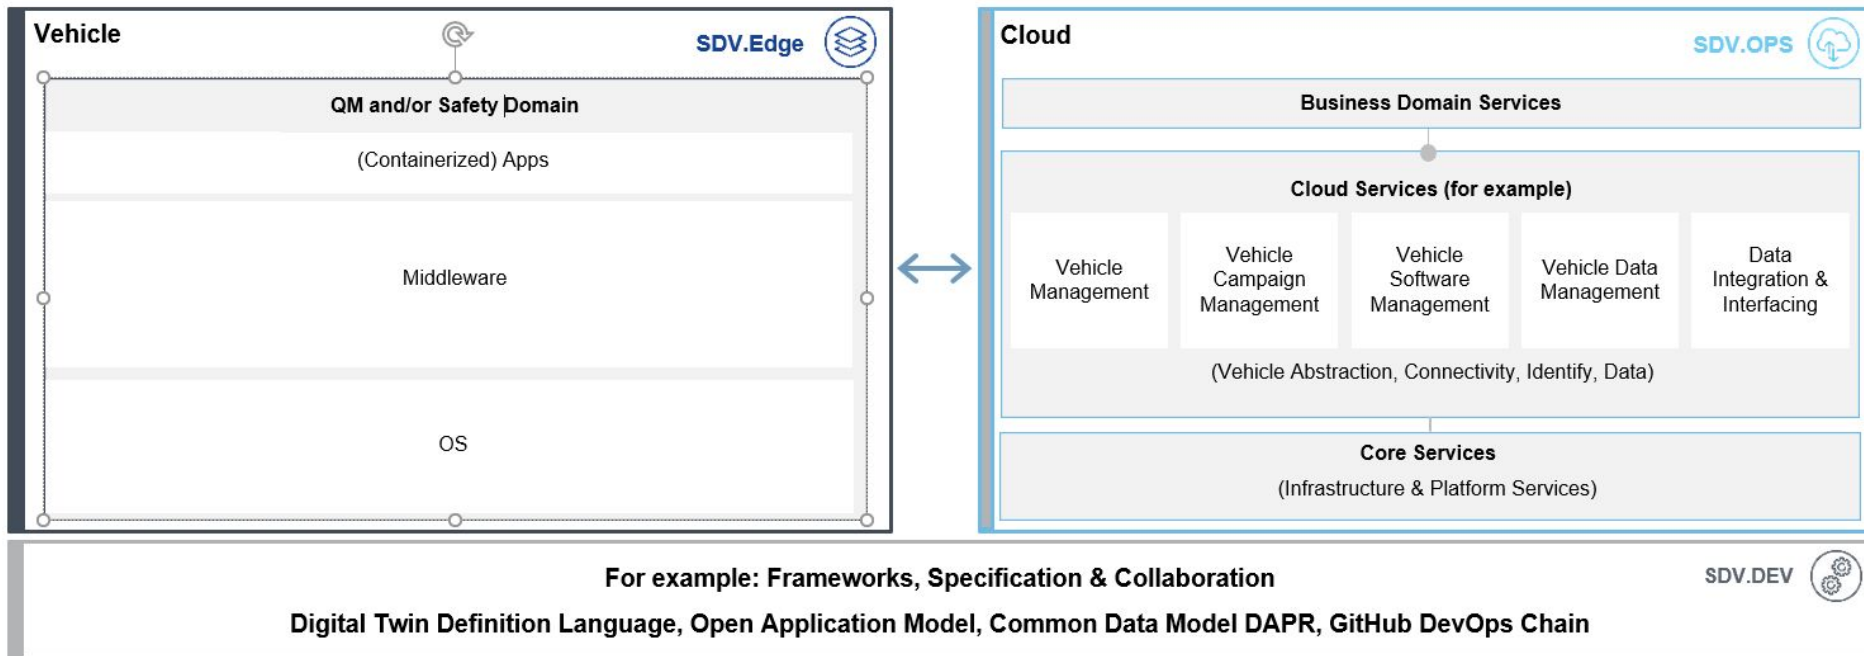

Spec

- Non-consensus driven
- No single “the SDV stack”
- Distributions
- Gaps needs to be filled

The SDV Current Scope (with examples)

Don't reinvent the wheel **The ecosystem around**

AUTOSAR

 **SOAFEE**

 **COVESA**
Accelerating the future of connected vehicles

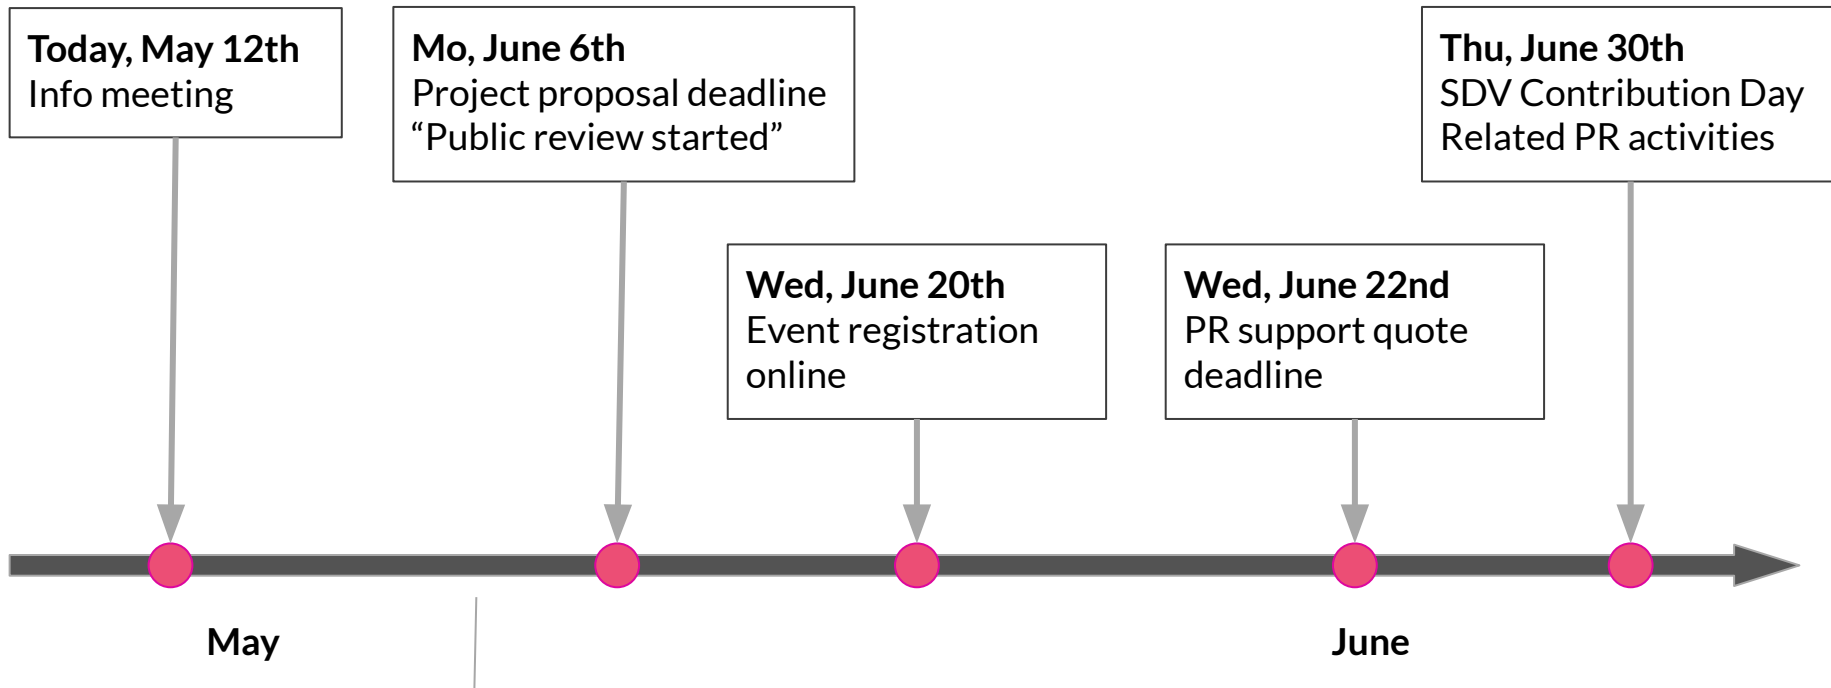

**AUTOMOTIVE
GRADE LINUX**

.... and more

Planned Milestones 2022

SDV Contribution Day – Timeline

SDV Contribution Day

June 30th

Location: ZF Forum, Friedrichshafen and online

Limited # of seats for the onsite part

Time: 13:30 CEST - **Duration:** 4-5h + **Come together**

6-8 projects

Preliminary Agenda	
Intro and welcome	5m
Intro Software Defined Vehicle	15m
Project presentation + Q&A	30m
...	
Project presentation + Q&A	30m
Open discussion - how projects could be combined	30m
Outlook and next steps	10m
Come together	

SDV Contribution Day

Some remarks

- Active and passive participation open for everyone
- Please support PR related activities
- Based on the number of project proposals we may need to limit the number which can be presented at the Contribution Day

Some more points

- Projects can be started at any time
- There is no “approval” process next to the EF governance compliance

The Relationship between Projects and Working Groups

Projects and Working Groups

Projects

Transparent
Open
Vendor-neutral

Working Groups

Group of committers

Build code, specification documents, documentation

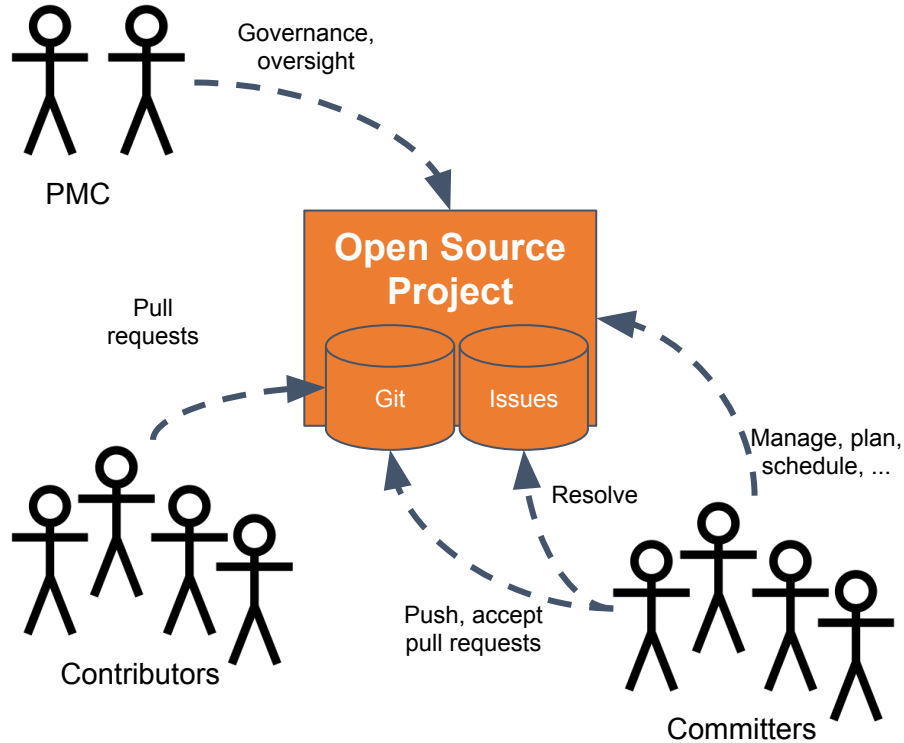

Group of organizations

Focus, promote and augment Eclipse technologies
Open Governance

Relationship between Projects and Working Groups

- > There is no notion of Working Group ownership of Projects
 - Working Groups are intended to *complement* open source projects by undertaking activities that open source projects are not well suited for
- > Working Groups express non-exclusive interest in Projects
 - Specification Projects are automatically included in the Working Group's project set
- > The union of the Committers from a Working Group's Projects comprise the Working Group Committers

Project

Are initially appointed and elected throughout the project

Eclipse Foundation Working Groups

Foundation in a box

Vendor-Neutral Governance

Collaboration under a vendor neutral governance model

Ecosystem Development and Marketing

Eclipse Foundation staff help build a community for collaboration through marketing and community programs

Collaborative Management

Working groups coordinate the efforts of open source projects by providing a shared vision and roadmap

Specification Development

Eclipse Working Groups use the proven Eclipse Specification Development processes that provides a framework for the development of specifications in open source

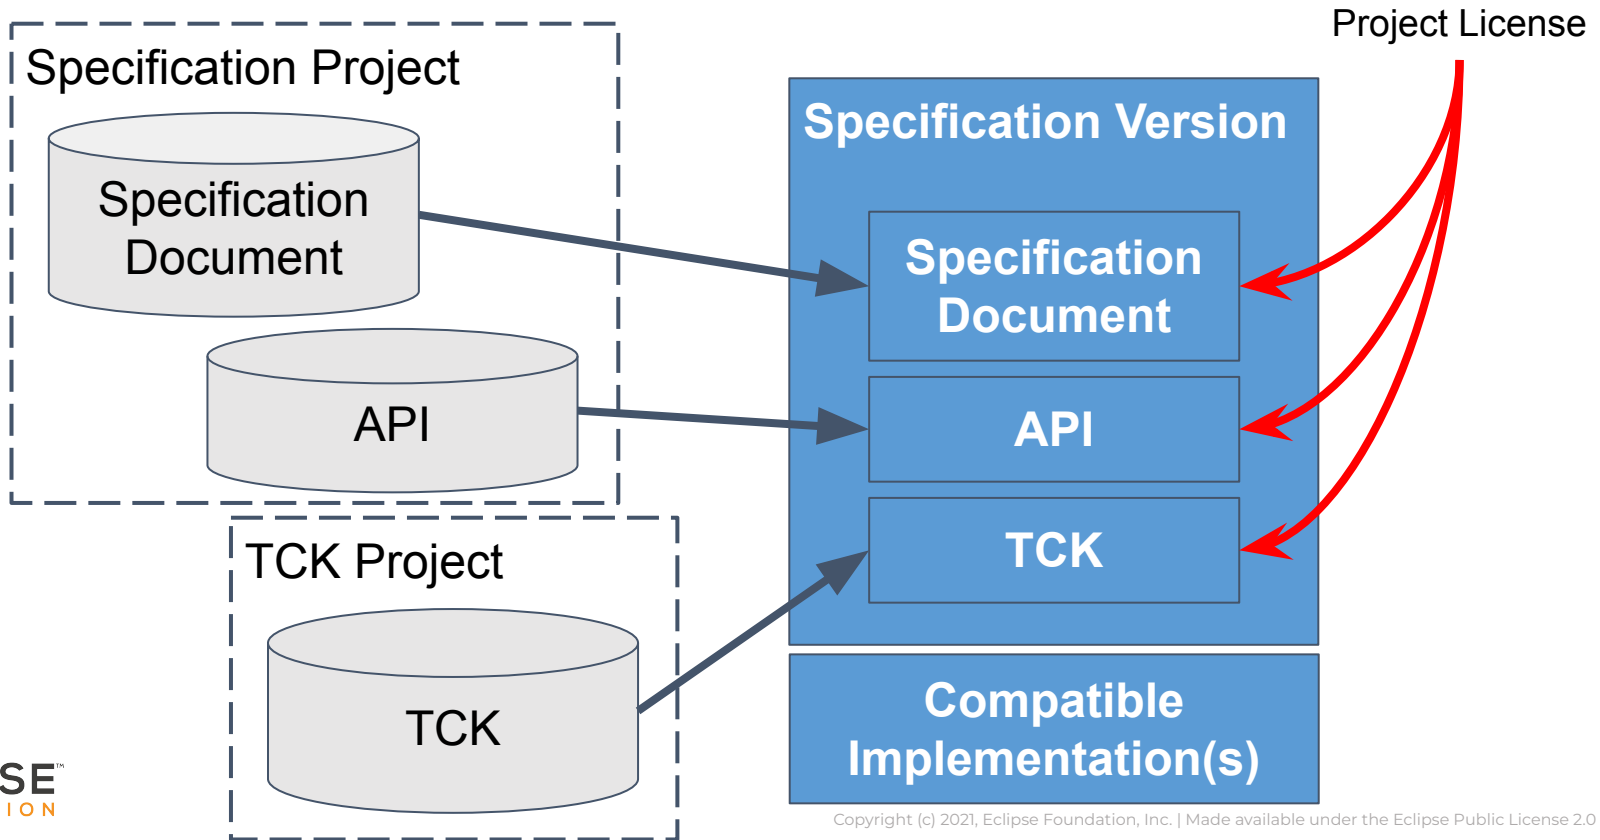

Branding and Compatibility

Creating branding and compatibility programs to build a trusted ecosystem of implementers and consumers

Relationship with Specification Projects

- > Working groups may choose to engage in specification development
 - Prior to the Working Group engaging in any specification work, the *Steering Committee* must vote to adopt a particular version of the EFSP or derivative
 - *Steering committee* must select default patent license
- > Specification Projects operate under the purview of exactly one Working Group
 - Specification Projects are automatically included in their Working Group's project set; Specification Project committers are automatically included in their Working Group's committers
- > Specification Committee is responsible for the operation of the specification process for those projects operating under the Working Group's purview

Specifications and associated projects

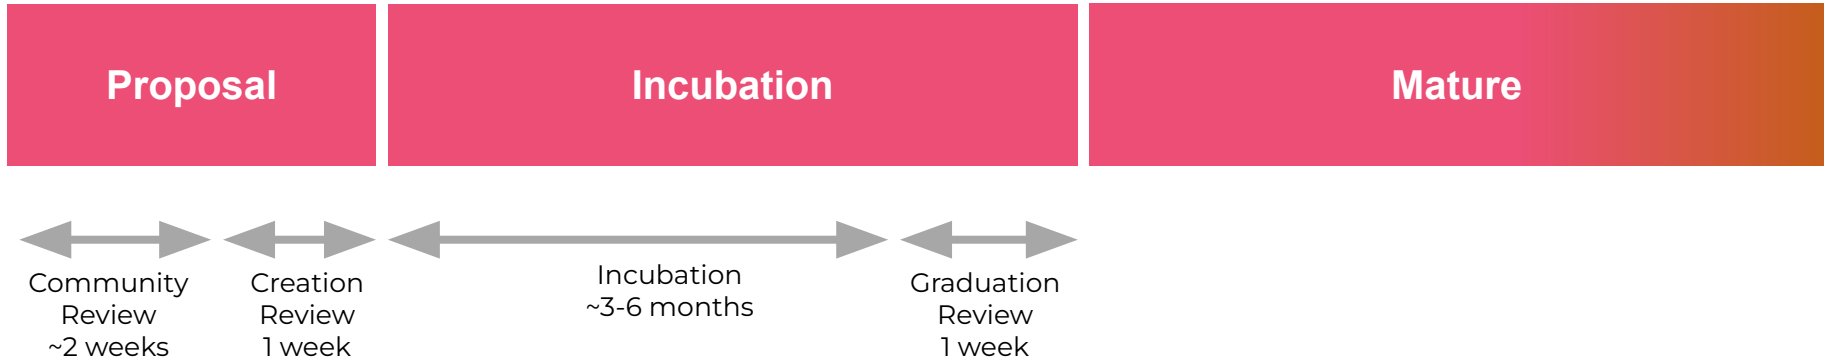

The Project Onboarding Process

Project Phases

Eclipse Open Source Project Timeline

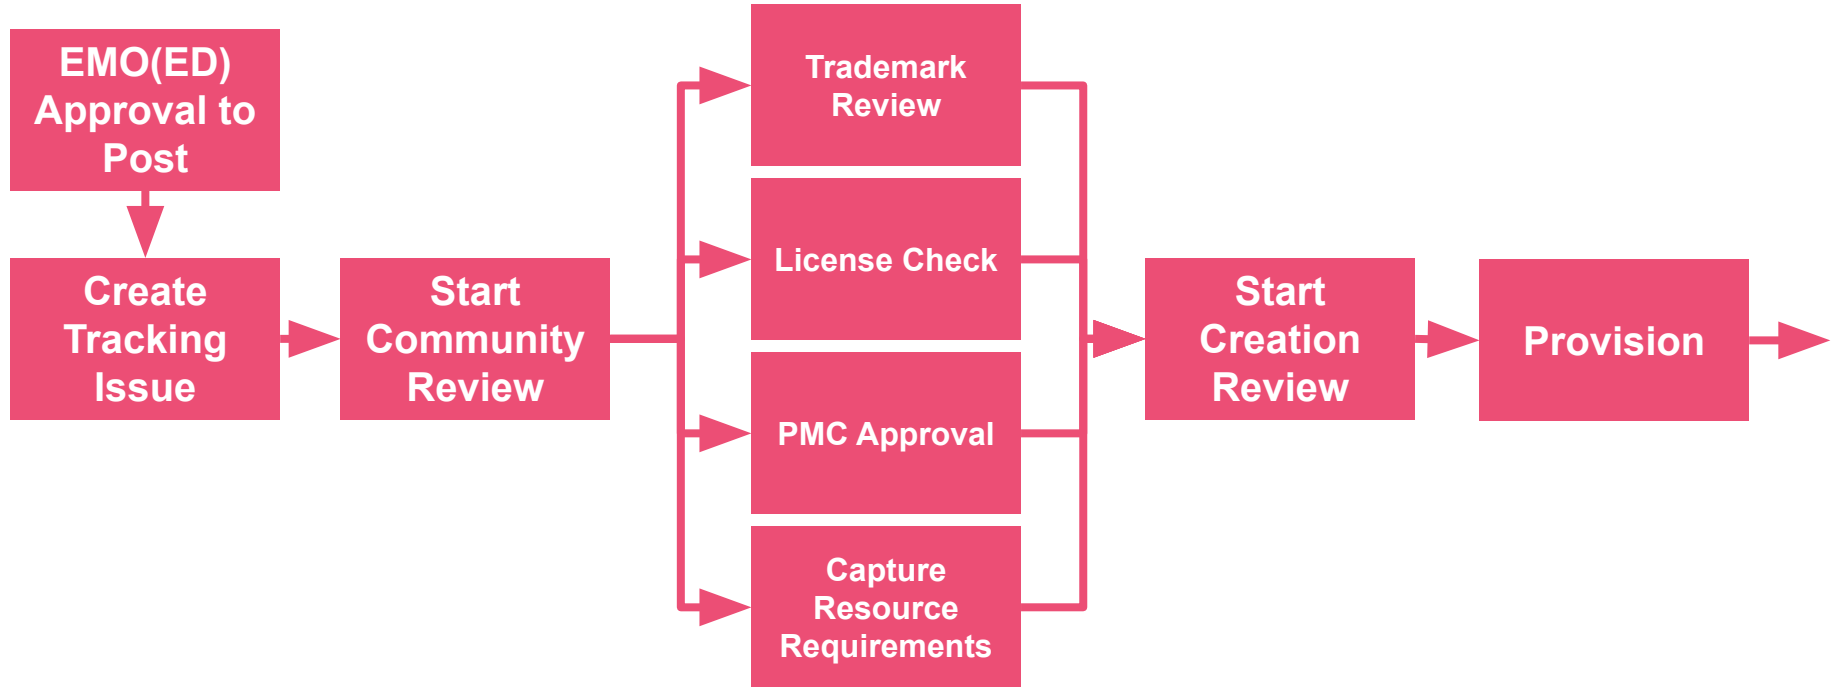

*Not to scale

The Proposal

- Name, Parent Project
- Background, Description, and Scope
- Project Leads, Committers, and Mentors
- License(s)
- Legal Issues
- Initial Contribution
- Resources

<https://projects.eclipse.org/node/add/project-proposal>

Tracking the Proposal

Logos, Trademarks and Websites for Projects

Project Logos and Trademarks

Logos and Branding

- Eclipse Foundation manages Working Group logo and brand development, while projects are responsible for their own logos
- Use your agency or any that focus on logo creation:
 - [99designs](#)
 - [designhill](#)
 - [designcrowd](#)
- Reimbursement to projects up to €500
- There has been discussion around creating Working Group brand elements that can be aligned with project logos. [Here's an example](#)

Trademark Policy for Project Names and Logos:

- Any resulting trademark belongs to Eclipse Foundation
- Project name can't contain any 3rd party trademarks
- All logos, trademarks and domains to be transferred to the foundation via a [Trademark and Domain Name Assignment Agreement](#)

Other Helpful Links:

- [Eclipse Foundation Trademark Usage Policy](#)
- [Eclipse Marketing Services](#)

Project Websites

Creating a Project Web Presence

- All projects have a [web presence](#) on Eclipse.org
- Content must be committed to a [git repo on Eclipse servers](#).
- If a project is willing to invest into something nicer, they have the option of building their own website.
 - Project websites are hosted under a service that is owned/managed by the Eclipse Foundation
 - Domains are owned/managed by the foundation. The foundation can help in securing URLs
 - Projects are provided with a git repo. However, the EF team does not typically get involved with project content or website creation/maintenance other than to provide guidance and answer questions.
- Keep it simple with the available [Hugo website boilerplate](#)
- Projects can use whatever technology they want as long as they adhere to the [Eclipse Foundation hosted Services Privacy and Acceptable Usage Policy](#) and the [Eclipse Foundation Trademark Usage Policy](#). However, EF support levels may vary if a different stack is used than the one we use.
