About

EGit is an Eclipse Team provider for Git. Git is a distributed SCM, which means every developer has a full copy of all history of every revision of the code, making queries against the history very fast and versatile. The EGit project is implementing Eclipse tooling for the JGit Java implementation of Git.

JGit is an EDL (BSD) licensed, lightweight, pure Java library implementing Git.

Introduction

EGit and JGit are Technology sub projects.

- http://eclipse.org/egit
- http://eclipse.org/jgit

This release is the 12th release for both projects at Eclipse.org, and the goal is to build an Eclipse community around Git.
Main use cases can now be done using EGit without using native Git.
